

# LPWAN COOKBOOK

How to develop LPWAN technology –  
real products, real networks

HARALD NAUMANN

First edition:

The book has been finalised and will be further updated as necessary. All purchasers and sponsors will receive free PDF updates regularly. Any comments, requests, tips and suggestions related to the book or download zone are welcome.

New chapters are **marked with an update date** and major changes are formatted with green text. This approach is meant to help owners of previous editions to identify the changes and additions more quickly.

1. Why Did I Write the LPWAN Cookbook?	6
2. Look back at the past of communication technology	8
2.1 From 0G in 1918 to private 5G in 2019	8
2.2 My experience in the nineties - Planning and installation of radio networks	18
3. Radio certifications, approvals, regulations	19
3.1 CE-Marking	19
3.1.1 The long road to CE marking	19
3.2 Target markt EU - European RED / CE	27
3.3 Target markt US - American FCC	27
3.4 Certification cellular Bluetooth gateway according to RED 2014/53/EU	27
3.4.1 Key data for a gateway with GSM, LTE-M, NB-IoT and BLE	29
3.5 Worldwide radio certification	32
3.6 DIN VDE 0855, grounding, lightning protection, equipotential bonding	32
3.7 Local building law and the installation of an antenna system	32
4. How to set up a private LPWAN	32
4.1 Intro to the private LPWAN for a village and a town in Germany	32
4.1.1 Private LPWAN for a small village – not in Gaul (Latin: Gallia)	33
4.1.2 Private LPWAN for a German city	36
4.2 Radio propagation basics	38
4.2.1 Quick overview for planning, simulation and testing a private LPWAN	38
4.2.2 What is a Radio Propagation Model like Okumura-Hata?	41
4.2.3 Free field loss	47
4.2.4 Line of sight	48
4.2.5 How to calculate the link budget in LPWAN	49
4.2.6 LPWAN gateway in the middle of the North Sea – k-factor	51
4.3 LPWAN gateway in the middle of the North Sea – Fresnel zone	55
4.4 LPWAN gateway on a farm in Australia – diffraction of the radio wave	58
4.5 LPWAN Gateway antenna selection	62
4.5.1 LPWAN gateway antenna gain	62
4.5.2 Antenna Diagram of the LPWAN Gateway	64
4.5.3 Half width of the LPWAN antenna	64
4.5.4 Antenna side lobe attenuation	64
4.5.5 Antenna forward / backward ratio	64
4.5.6 Antenna bandwidth	64
4.5.7 Eight antenna diagrams in comparison	65
4.6 Planing of private LPWAN for the community of Kirchheim	74
4.6.1 Basic considerations for LPWAN planning	74

4.7	Simulation of private LPWAN	76
4.7.1	The first LPWAN gateway for Kirchheim in the state of Hesse	76
4.7.2	The first site for the private LPWAN in Kirchheim	78
4.7.3	The second site for the private LPWAN in Kirchheim	81
4.7.4	The third LPWAN gateway site - Allendorf	82
4.7.5	The fourth LPWAN gateway site - Kemmerrode	83
4.7.6	The fifth LPWAN Gateway site - Reiboldhausen	83
4.7.7	The sixth LPWAN Gateway site - Gershausen	84
4.7.8	The seventh to ninth LPWAN gateway	84
4.7.9	The tenth LPWAN Gateway site - Willingshain	85
4.7.10	The eleventh LPWAN Gateway site - Frielingen	86
4.7.11	The twelfth LPWAN Gateway site - Heddersdorf	87
4.7.12	Summary of the gateways for the Gemeinde Kircheim	88
4.7.13	Further LPWAN gateway sites for the community of Kircheim	89
4.8	Testing of private LPWAN	90
5.	Radio access methods	90
6.	LPWA technologies description	90
6.1	Sigfox	90
6.2	LoRaWAN	90
6.3	NB-IoT	91
6.4	Energy saving in NB-IoT versus GSM / LTE	91
6.4.1	NB-IoT complete power off	92
6.4.2	NB-IoT reattach with 154 Link budget and no receiving window	93
6.4.3	NB-IoT Attach with TAU including 12 Byte payload	94
6.4.4	NB-IoT Reattach without TAU including 12 Byte payload	95
6.4.5	NB-IoT Reattach w/o TAU including 12 Byte payload and minimum timer	96
6.4.6	NB-IoT Reattach w/o TAU including 360 Byte payload and minimum timer	97
6.4.7	NB-IoT energy saving by the right antenna system	98
7.	Comparison of LPWAN (NB-IoT, LTE-M, LoRaWAN and SIGFOX)	98
8.	LPWAN device development	98
8.1	Antenna selection / development	98
8.1.1	Antennas compared to light and candle	98
8.1.2	Antennas compared to tones and musical instruments	100
8.1.3	Antenna size according to Chu's limit	102
8.1.4	Influence of the size of the groundplane on the parameters of an LPWAN antenna	104
8.2	PCB layout and mistakes	104
8.2.1	SIM card with separated Ground	104
8.2.2	TX Power Amplifier with separated Ground	104
8.3	Power supply and battery	104
8.4	Recommended measurement equipment	105
8.4.1	Vector Network Analyzer	105
8.4.2	Antenna Radiation pattern test system	105
8.4.3	How to test batteries	105
8.4.4	How to measure ultra low LPWA device currents	105
9.	Amendment to the LPWAN Cookbook	106
9.1	Lecture "Embedded antenna - make or buy" including slides and text	106

9.1.1	Self Made Embedded Antenna Designs versus a Chip Antenna – ToC	
	107	
9.1.2	NB-IoT throughput versus antenna gain	108
9.1.3	Flowchart for embedded antenna selection	109
9.1.4	LPWAN antenna designs, testing and consulting – NB-IoT, LTE-M, LTE, GSM, GPS, LoRa, SIGFOX	111
9.1.5	Design process of your wireless IoT application	115
9.1.6	Reference design akorIoT SensPRO	118
9.1.7	The 4 Cent antenna for classic Bluetooth, WiFi, ZigBee and more	118
9.1.8	Antenna gain and beam angle	119
9.1.9	Principle of operation of a VNA	121
9.1.10	Antenna Return Loss by VNA	123
9.1.11	Return Loss and VSWR for your antenna	123
9.1.12	F antenna simulation	124
9.1.13	Antenna bandwidth and Return Loss	125
9.1.14	Simulation of a GSM quad-band antenna	125
9.1.15	Influence of the ground plane	127
11.1.1	Influence of the plastic enclosure	128
12.1.1	Round shaped NB-IoT PCB antenna	129
13.1.1	Three axes radiation pattern	130
14.1.1	Ceramic chip antenna design review	131
14.1.2	PCB antenna design review	132
14.1.3	GSM / UMTS antenna - poor Return Loss	135
14.1.4	868 MHz stubby antenna - poor return loss	136
14.1.5	Contact less coupling of antennas	139
14.1.6	LPWAN bandwidth comparison	140
14.1.7	Summary	141
14.1.8	Thank you	141

# 1. Why Did I Write the LPWAN Cookbook?

I have been working in the wireless industry for more than 30 years. 30 years ago we had no word for "IoT" or "LPWAN". So when we developed radios with UART for data communication we had no way of knowing that these things would be called "IoT devices" decades later. 30 years ago there was no GSM network and the words NB-IoT, LoRaWAN, Sigfox or Weightless did not yet exist. I took my first steps in wireless data communication with Frequency Shift Keying (FSK) on private mobile phones (PMR). With PMRs we achieved communication speeds of 3600 bits per second. A short time later we started using public analogue trunked radios. These trunked radio systems provided local terrestrial wireless networks. We planned the trunked radio and the common wave radio networks with paper and pencil and then checked the real network coverage with test transmitters because there were no PCs with enough memory to run the simulation software. The last public analogue trunked radio network in Germany was taken out of service some years ago.

LPWAN is divided into public and private radio networks. Nowadays, anyone can set up their own private LPWAN on, for example, LoRaWAN or Weightless. In Germany, NB-IoT and LTE-M can be received nationwide via three network operators. In addition, there are various local city-wide LPWANs on LoRaWAN. The number of possible radio networks has multiplied.

NB-IoT and LTE-M are the new stars in the IoT firmament and combine classic cellular networks with LPWAN. The base station antennas for LTE are also used for NB-IoT and LTE-M. Both LPWA technologies feature new variable timers that enable wireless power management and extend the potential life of devices up to 10 years with the original battery. If the network coverage of the public LPWAN is not good enough for you, you have the option to set up your own radio network.

The LPWAN cookbook describes how to plan, simulate and test your own private LPWAN. On the cover of the book you can see the simulation of an LPWAN gateway for my birthplace of Kirchheim. The region of the community of Kirchheim, which is in Hesse/Germany, with its 12 villages and 8 valleys is simulated and tested in this book. The complete location data, with the height of the antenna and the digital files with the directional diagrams of almost 15 antennas can be downloaded free of charge with the LPWAN Cookbook. Everybody can follow the simulation with free software on their PC and plan their own LPWAN with the manual in the book.

A wireless network without sensors, telemetry and devices for locating objects is without value. A detailed explanation of how to develop and test your own LPWA device is given. An antenna is the most important component in an LPWA device. +/- 3 dB antenna gain mean the difference between 2.5, 5 or even 10 years of service from the battery. An antenna for NB-IoT/LTE-M and another for LoRaWAN/Sigfox are shown and explained in the simulation and in measurements. Everybody can copy these LPWAN PCB-antennas into their board. After the assembly of the PCB emissions testing is to be done according to RED (EU) or FCC (USA). The radio certification is another important chapter in the LPWAN Cookbook.

Once the hardware concept has been clarified, the software concept must follow. In the embedded domain, hardware and software can often not be separated from each

other. The Proof of Concept (PoC) is simple, the prototype is too, but a device with 10 years of battery life does not have a reset button. You can't pull a plug. The software must be bug-free and restart itself if necessary.

Another big chapter is the comparison of NB-IoT, LTE-M, LoRaWAN, and Sigfox. Since the updates of the LPWAN Cookbook are free as with the IoT / M2M Cookbook, this chapter will change at regular intervals. NB-IoT started life with many more features than other LPWANs in its first version and new features are added every few months. The LPWAN technology comparison should help to lighten the darkness of the LPWA jungle.

The LPWAN cookbook is intended to help wireless application developers to save some time and perhaps provide inspiring ideas. It's a book for developers and summaries the common experiences that I have gathered over several years in my various professions. Through leading a development team, I learned to think like a developer of an LPWAN device. In over 30 years of working with manufacturing and distribution, I've given wireless application developers the same advice and recommendations over and over again. With LPWAN, things do not get any easier.

In 2017 I launched reference designs for LPWAN called akorIoT with business partners. In addition, there is the collected experience from the development of almost 100 antennas, antenna matching or the development of entire LPWAN devices. The aim of this book is to guide the developers from the concept phase of an LPWAN device to the finished series product.

I hope you will enjoy reading the book and I hope it will save you some time as well.

1. Why Did I Write the LPWAN Cookbook?	6
2. Look back at the past of communication technology	8
2.1 From 0G in 1918 to private 5G in 2019	8
2.2 My experience in the nineties - Planning and installation of radio networks	18
3. Radio certifications, approvals, regulations	19
3.1 CE-Marking	19
3.1.1 The long road to CE marking	19
3.2 Target markt EU - European RED / CE	27
3.3 Target markt US - American FCC	27
3.4 Certification cellular Bluetooth gateway according to RED 2014/53/EU	27
3.4.1 Key data for a gateway with GSM, LTE-M, NB-IoT and BLE	29
